COLVA PANELS

## COLVA PANELS another idea for wall decor

The Colva decorative panels, offered by Atmosfera, go far beyond mere decorative elements. They combine design and performance by blending the warm aesthetics of wood with the acoustic properties of a felt designed to correct echoes in a room. This acoustic insulation transforms the space by improving the sound ambiance, thus creating an atmosphere that is both soft and elegant.

With their wood-grain finish, these panels bring a modern and friendly touch, perfectly suited to both contemporary interiors and more classical spaces. They can be used as decorative wall elements to delimit a space, as a headboard, or for any other configuration.

Available in two finishes and three sizes, these panels are easy to install. They simply need to be glued or fixed with screws, in vertical or horizontal orientation, depending on preferences. They can also be cut to fit the desired aesthetic.

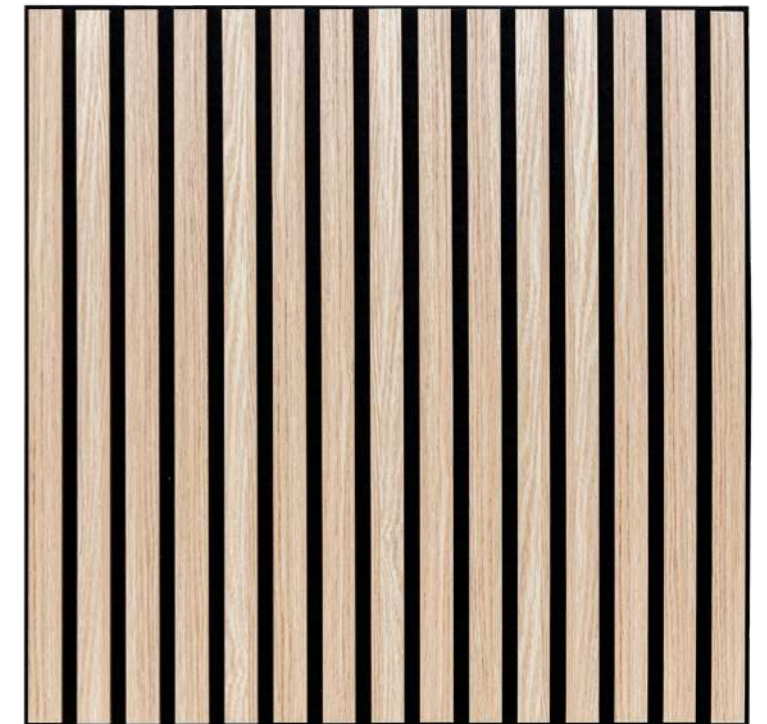

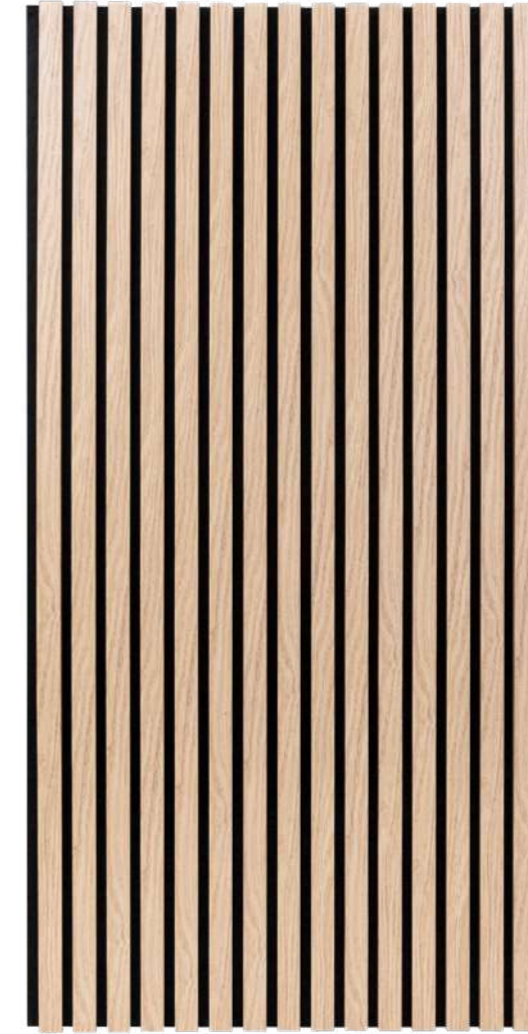

A great idea at a fair price to transform spaces!

Acoustic felt panels for  
reduction of echoes  
FSC® certified MDF battens with 3 surfaces  
laminated in certified textured paper  
FSC®, wood imitation  
2 finishes: light oak effect or walnut effect
